Taia

Your documents.

Every language.

Same file back.

Translate your manuals, catalogs and contracts into any of 209 languages, with your own terminology and the formatting intact.

An overview of Taia · taia.io

TAIA VS TYPICAL TRANSLATION TOOLS

Why teams switch to Taia

TYPICAL TRANSLATION TOOLS	WITH TAIA
✕ You paste text in and get text back. Someone rebuilds the layout by hand, once per language.	✓ Upload the file and get the same file back, translated, with the layout in place.
✕ The same product name gets three translations across three documents.	✓ Your glossary keeps every term the same, in every document and language.
✕ Last year's approved wording is forgotten, so every update starts from scratch.	✓ Your translation memory hands the AI your approved wording before it translates.
✕ AI in one tool, review in another, agencies and email threads for anything that matters.	✓ AI translation, your team's review and professional linguists, in one project.

HOW IT WORKS

Upload a file. Get the same file back, translated.

1 Upload

65+ formats, including Word, Excel, PowerPoint, InDesign and XLIFF. One file or a batch.

2 Translate

AI translates into up to 209 languages, guided by your glossary and translation memory (and your style guide on Advanced and Premium).

3 Download

Your layout, tables and styling stay in place. Several languages come back as one ZIP.

Then you decide how much human review it gets: none, your own team's, or professional linguists'. PDFs work too and come back as editable Word or PowerPoint files, but the original file gives the cleanest result.

YOUR RESOURCES

Taia reads your material first

Glossary

The terms that must always be translated one way, and the names that must never be translated.

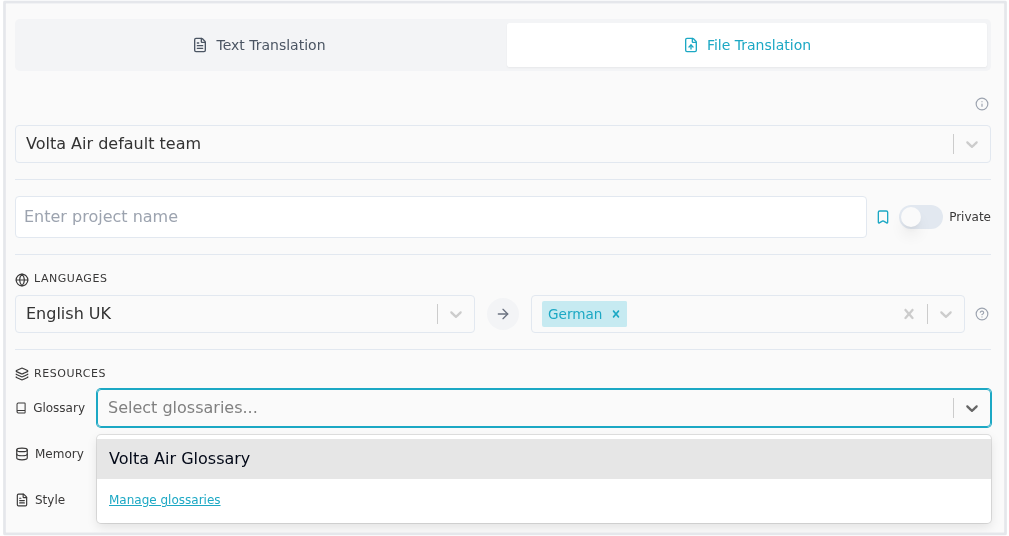

Translation memory

Every sentence your team already approved. Taia reads it before translating anything new.

Style guide

Tone, formality, audience and house rules, such as formal Sie in German.

Glossaries, memories and style guides are on Pro and Enterprise.

Your content is never used to train AI models. It's read at translation time to guide the AI on your own projects.

Already have glossaries or past translations? We can import them, so you don't start from scratch.

THREE WAYS TO TRANSLATE

As much human review as each document needs

Translate Instantly

- AI translation in minutes.
- Standard, Advanced or Premium AI, depending on the content.
- A first draft: for anything you publish, have a person read it.

Translation Studio

- Your own team reviews the AI translation.
- Assign it to a colleague, who edits it in Taia's built-in Translation Editor and submits it.
- With a translation memory attached, their edits go into it for next time.

Professional Localization

- Taia's professional linguists translate it.
- Instant quote, a choice of three quality tiers, and a project manager.
- ISO 17100 certified on Enhanced and Ultimate.

All three happen in the same project, with the same glossary and translation memory.

AI TRANSLATION

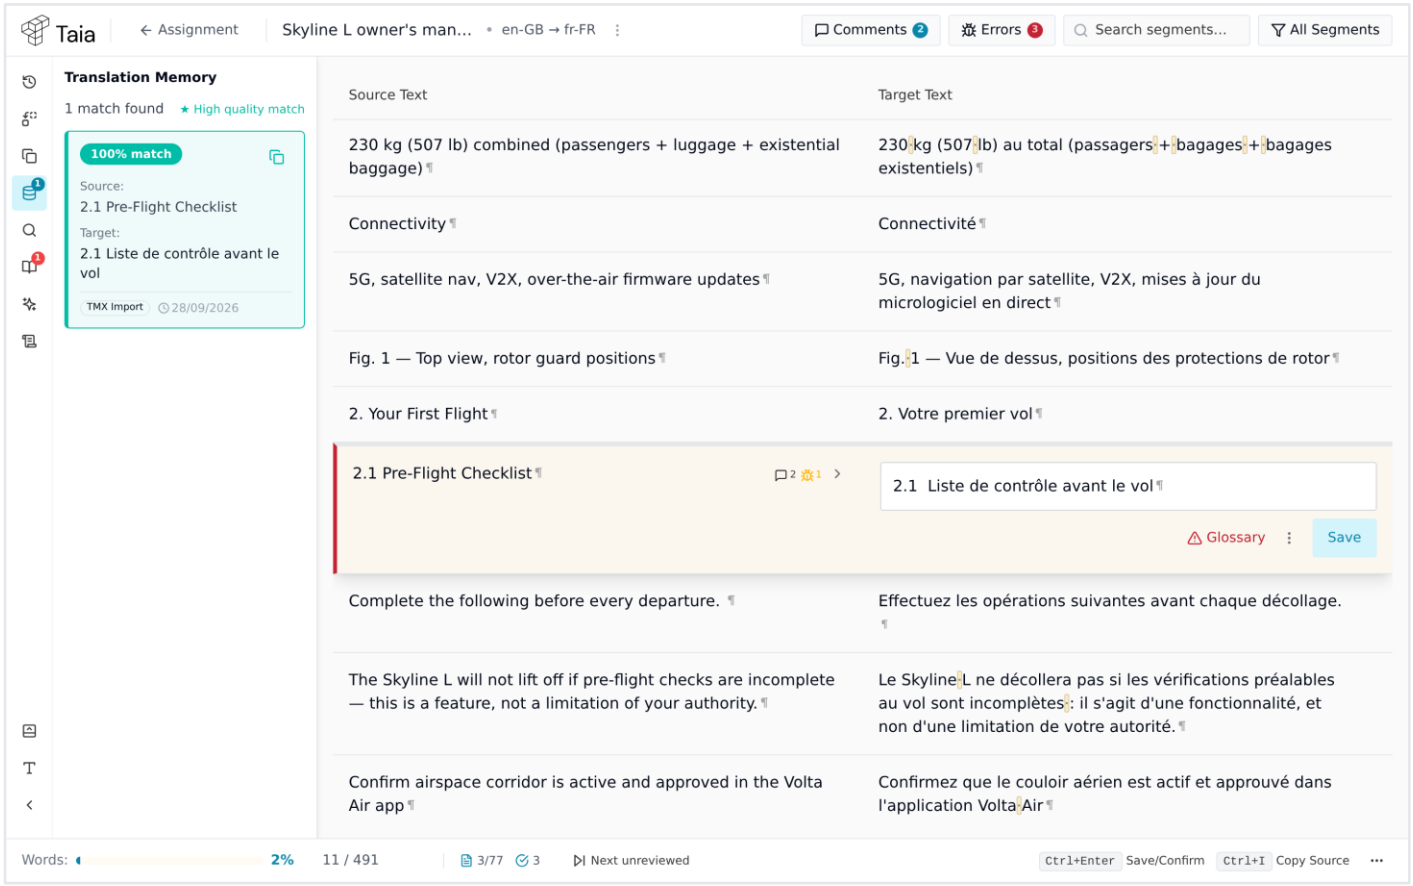

Three AI tiers, priced in credits

Tier	Credits per word	Best for
Standard	1	Everyday and internal content
Advanced	2	Most business content. Also follows your style guide
Premium	4	Complex or high-stakes content. Also follows your style guide

- Credits are counted per word, per target language. All three tiers use your translation memory and glossary; Advanced and Premium are on Pro and Enterprise.
- Pro plans include a monthly credit allowance (100,000 credits is 100,000 words with Standard AI). The exact cost shows before you confirm.
- No AI translation is 100% reliable, ours included. Better AI means less for a person to fix, not nothing.

THE TRANSLATION EDITOR, BUILT INTO TAIA

Review it without leaving Taia

- **No separate tool:** open any translation in Taia and review it right there.
- **Source and translation** side by side, one segment at a time.
- **Translation memory matches** with a match score, ready to insert.
- **Glossary terms** flagged when one is missing.
- **Automatic checks** for formatting tags and length limits when you save.
- **Comments and error flags** for reviewers, then Submit Assignment when done.

The Translation Editor is on Pro and Enterprise.

PROFESSIONAL LOCALIZATION

When it has to be right: professional linguists

Essential

One professional linguist.

Internal documents, product descriptions, manuals.

Enhanced

A translator and a reviser. ISO 17100 certified.

The tier most people choose for anything published.

Ultimate

Translation, Editing and Proofreading (TEP): a translator, a reviser and a proofreader. ISO 17100 certified.

Regulated, legal and print content.

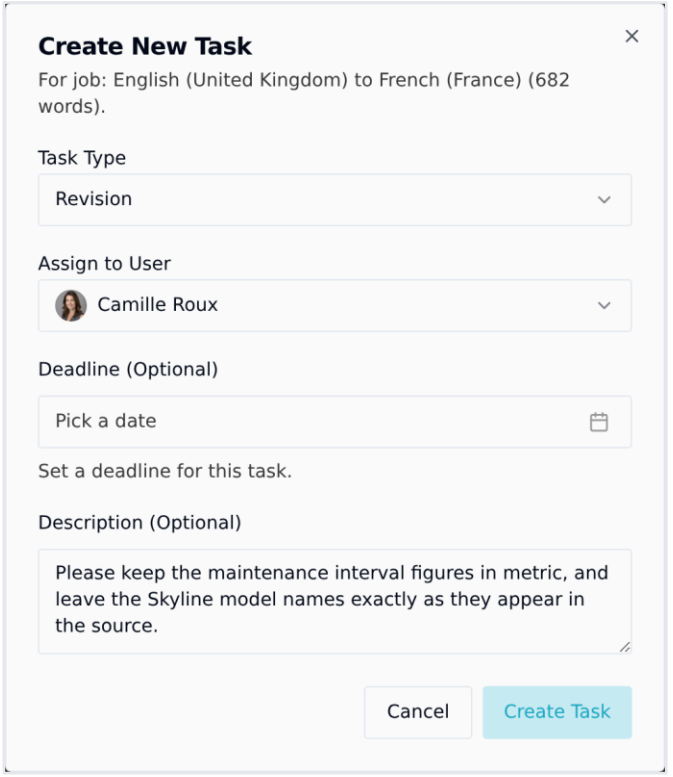

Instant quote. Approve it and a Taia project manager takes it from there, using your glossary and translation memory, in the same project. 2,000+ vetted native linguists.

TEAMS

Built for teams, not just one translator

- **One organization** for your people, projects, glossaries, translation memories and billing.
- **Teams and roles** decide who manages work, who reviews it and who can only see their own tasks.
- **Shared resources:** everyone translates with the same glossary and memory.
- **Invite your freelancers** as external linguists, who see their assignments and nothing else.
- **An API** to send files from your own systems and get translations back automatically.

Organizations, teams and the API are on Pro and Enterprise.

Assigning a review to a colleague in Translation Studio.

DATA AND SECURITY

Your content stays yours

Never used to train AI

Your documents, translations, memories, glossaries and style guides are never used to train AI models.

Hosted in the EU

Your content is stored on servers in the EU (Dublin, Ireland), encrypted in transit and at rest.

GDPR

GDPR compliant, with a data processing agreement available.

ISO 17100

Certified process for Professional Localization on the Enhanced and Ultimate tiers.
